HOARD OF THE PROCRASTINATORS

WNMHGB TOS—era Transporter Room — Page 5

Assembly Instructions (continued)

As always with very tiny parts, you should **score the console before cutting it out**. Once done, assemble the parts individually, then glue the legs to the console, and the strut in between the legs. When the glue has dried, you need to decide whether to glue the console directly to the floor (not recommended for a fold-flat version) or to create a base for it (25 x 30 mm, use 2.5 mm grey cardstock painted black).

Finally, assemble the transporter room. Put the floor inside the walls, and the transporter console about 1 inch from the wall facing the transporter platform. That's it, ready to beam out an away team to a mission.

If you want to keep your transporter room assembled, just glue the floor to the floor flaps. I still recommend not glueing the console to the floor, though, as some minis might sport a base larger than 1 inch. You wouldn't want the transporter chief being unable to do their job, would you?

Enjoy your new scenery piece!

Printing: turn scaling OFF, have centering ON, set to GOOD or BEST setting, Use Matte Photo paper for best results.
