

## Multi Utility Truck assembly instructions.

Main parts of M.U.T. are simple boxes. Build and assembly as indicated. Start with the cab and be careful to align the decoration on the sides. Fenders may be trickier to assemble. Tabs marked with \* have not to be folded but glued on the underside of chassis. First glue the longest tab marked with \* on the underside and then the rounded parts. It's easier to pre-form the rounded parts when glue is not set. Use wheel spaces on chassis only as guide, as they are not perfectly sized. Box may be glued on fender and chassis between wheels. Wheels are taken from 4x4 GPV kit, made by the great Christoper Roe. Thanks! MUT was meant to be modular, I hope to release further expansions near in the future. Have fun!
